Digit cards and a 100 square

You will need:

- multiple sets of digit cards 0 → 9
- some coloured counters, one colour per player

Shuffle the cards and place face down on the table. Take turns to turn over two cards. Make a two-digit number with your cards. Place a counter on your two-digit number. The player with four counters in a row wins the game.

0	1	2	3	4	5	6	7	8	9
10	11	12	13	14	15	16	17	18	19
20	21	22	23	24	25	26	27	28	29
30	31	32	33	34	35	36	37	38	39
